DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 3 and 37-45 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 171-241 of copending Application No. 10/776,558. Although the conflicting claims are not identical, they are not patentably distinct from each other because at least the independent claims 171, 190, 208, 226, 238 and 240 of '558 encompass the scope of at least similar sole independent claim 3 of the '424 application.

The difference between the independent claims of the instant application and '558 is that the instant application describes a method for operating a CDMA user device opposed to '558 describing the apparatus wherein at least the following is

Art Unit: 2617

claimed, for example in claim 171, a code division access (CDMA) user device comprising: a CDMA transceiver; and a controller operably connected to the CDMA transceiver to establish a packet data communication session with a network in accordance with a protocol architecture, the protocol architecture having a plurality of protocol layers including a physical layer, wherein the controller is further operable with the CDMA transceiver to facilitate use by the CDMA transceiver of a data traffic channel and a control channel associated with the packet data communication session, the control channel carrying information indicative of a data rate associated with the data traffic channel, wherein the control channel is not adapted to carry voice or data traffic, and wherein a state of at least one of the plurality of protocol layers above the physical layer is maintained during the packet data communication session after the data traffic channel has been released.

Omission of element and its function in combination is obvious expedient if remaining elements perform same function as before. In re KARLSON (CCPA) t36 USPQ 184 (1963).

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.
